# GIT QUICK REFERENCE CARD

Most frequently used GIT commands – Version v1.1 May 2014

| Main commands |   |  |  |  |
|---------------|---|--|--|--|
| add           | Add file contents to the index  |  |  |  |
| -A [:/]       | adds all file changes including deletions to the staging area [for the whole tree]          |  |  |  |
| -f            | allow adding otherwise ignored files  |  |  |  |
| -             | choose hunks of patch between the index and the work tree and add them to the index         |  |  |  |
|               | Apply a series of patches from a mailbox  |  |  |  |
| archive       | Create an archive of files from a named   |  |  |  |
|               | Find by binary search the change that introduced a bug                                      |  |  |  |
|               | for existence of $file$ in last combisect run test -f $file.txt$                            |  |  |  |
| branch        | List, create, or delete branches  |  |  |  |
|               | lists all branches including the remote branches  |  |  |  |
|               | delete branch   |  |  |  |
| -m            | rename branch:old_name new_name   |  |  |  |
| -ν            | lists more information about the branches   |  |  |  |
| bundle        | Move objects and refs by archive  |  |  |  |
| checkout      | checkout a branch or paths to the working tree (prepend before path to avoid ambiguousity). |  |  |  |
| -b            | create a branch new_name and switch to it instantly   |  |  |  |
|               | re working tree and reset index: out HEAD $dir$   |  |  |  |
| cherry-pick.  | can be used to change order of commits  |  |  |  |
| citool        | Graphical alternative to commit   |  |  |  |
| clean         | Remove untracked files from the working tree  |  |  |  |
| -f            | force (required!)   |  |  |  |
| -x            | include hidden files  |  |  |  |

| -d directories as well   |
|--|
| clone Clone a repository into a new directory  |
| commit Record changes to the repository  |
| -a adding changes of files known by the<br>Git repository to the commit  |
| <pre>-m Set comment for commitment - correct     it with prependingamend to argument</pre>                             |
| describe Show the most recent tag that is reachable from a commit  |
| diff Show changes between commits, commit and working tree, etc.   |
| cached compare stage area with last commit   |
| fetch Download objects and refs from another repository  |
| format-patch Prepare patches for e-mail submission   |
| gc Cleanup unnecessary files and optimize the local repository   |
| grep Print lines matching a pattern  |
| gui A portable graphical interface to Git  |
| init Create an empty git repository or reinitialize an existing one  |
| log Show commit logs (prepend before path to avoid ambiguousity)   |
| -p show diffs of each commit   |
| stat precise output with some statsabbrev-commit shortend (but unique) SHA-1 values for the commit objects             |
| oneline show logs as shortened oneliner  |
| reverse reverse log-history output   |
| follow entire history including renames  |
| graph show visual timeline   |
| $\Rightarrow$ show all files that ever existed in HEAD git logpretty=format:name-status $\mid$ cut -f2- $\mid$ sort -u |
| merge Join two or more development histories together  |

|          | git-merge)   |
|----------|--|
| -X       | apply option to strategy (eg. $ours, theirs$   |
| ff       | only update the branch pointer, without creating a merge commit (default)  |
| mv       | Move or rename a file, a directory, or a symlink   |
| notes    | Add/inspect commit notes   |
| pull     | Fetch from and merge with another repository or a local branch   |
| push     | Update remote refs along with associated objects   |
|          | e branch in remote repo called test<br>n: push origin :testbranch  |
| rebase   | Forward-port local commits to the updated upstream head  |
|          | rebase interactively   |
| autosqua |  |
|          | When the commit log message begins with "squash!" (or "fixup!"), automatically modify the todo list of rebase -i |
| reset    | Reset current HEAD to the specified state (Remove a <i>file</i> from staging area)                               |
| soft     | move HEAD pointer only   |
| mixed    | resets staging area to new HEAD (default!)   |
| hard     | resets staging area and working tree to new $\operatorname{HEAD}$  |
| revert   | Revert an existing commit  |
|          | Remove files from the working tree and from the index  |
| -r       | remove recursive – for removing additionally from repo, addcached *  |
| shortlog | Summarize git log output   |
| show     | Show various types of objects  |
| branch   | s you to see and retrieve files fromes, commits and tags:  |
|          | [reference]:[filename] > out.txt   |
| stash    | Stash the changes in a dirty working directory away  |

-s specify your merge strategy (see man

| status                 | Show the working tree status   |
|------------------------|--|
| submodule              | Initialize, update, add or inspect submodules                          |
| recurse-               | -submodules  |
|                        | pull changes from main repo + sub-                                     |
| tag                    | modules Create, list, delete or verify a tag ob-                       |
| 048                    | ject signed with GPG   |
| gitk                   | The git repository browser   |
|                        |  |
| Manipulators           |  |
| config                 | Get and set repository or global options                               |
| list                   | show all items in config   |
| get-rege               | =  |
|                        | show given pattern in my configura-<br>tion, e.g. 'alias'              |
| alobal                 | write to global ~/.gitconfig file                                      |
| _                      |  |
| •                      | write to system-wide configuration                                     |
| local                  | to repository's configuration .git/config                              |
|                        | lias for staged file prompt: con-<br>-global alias.staged 'diffcached' |
| ${\tt fast-export}\;.$ | Git data exporter  |
| ${\tt fast-import}\;.$ | Backend for fast Git data importers                                    |
| filter-branch          |  |
|                        | Rewrite branches   |
| mergetool              | Run merge conflict resolution tools to resolve merge conflicts         |
| pack-refs              | Pack heads and tags for efficient repository access                    |
| prune                  | Prune all unreachable objects from the object database                 |
| reflog                 | Manage reflog information  |
| relink                 | Hardlink common objects in local repos-                                |
|                        | itories  |
| remote                 | Manage set of tracked repositories                                     |
| -Δ                     | show details about the remotes   |
|                        | e all branches which are not in the                                    |
| remote                 | e anymore: remote updateprune  |

| repack | Pack unpacked objects in a repository        |
|--------|--|
| 1      | Create, list, delete refs to replace objects |

| Interrogators |   |
|---------------|---|
| annotate      | Annotate file lines with commit infor-                                |
|               | mation  |
| blame         | Show what revision and author last mod-                               |
|               | ified each line of a file   |
|               | Find commits not merged upstream                                      |
| count-objects |   |
|               | Count unpacked number of objects and their disk consumption           |
| difftool      | Show changes using common diff tools                                  |
| fsck          | Verifies the connectivity and validity of the objects in the database |
| get-tar-comm: | it-id   |
|               | Extract commit ID from an archive created using<br>archive            |
| help          | Display help information about git                                    |
| instaweb      | Instantly browse your working repository in gitweb                    |
| merge-tree    | Show three-way merge without touching index                           |
| rerere        | Reuse recorded resolution of conflicted merges                        |
| rev-parse     | Pick out and massage parameters                                       |
| show-branch.  | Show branches and their commits                                       |
| verify-tag    | Check the GPG signature of tags                                       |
| whatchanged.  | Show logs with difference each commit introduces                      |

## Interacting with Others

| archimport Import an Arch repository into git |
|---|
| cvsexportcommit                               |
| Export a single commit to a CVS check-        |
| OUT   |

cvsimport ... Salvage your data out of another SCM people love to hate

cvsserver ... A CVS server emulator for git imap-send ... Send a collection of patches from stdin to an IMAP folder quiltimport. Applies a quilt patchset onto the current branch request-pull Generates a summary of pending chansend-email .. Send a collection of patches as emails svn..... Bidirectional operation between a Subversion repository and git

# Manipulators (plumbing)

apply..... Apply a patch to files and/or to the index checkout-index

Copy files from the index to the working tree

commit-tree. Create a new commit object

hash-object. Compute object ID and optionally creates a blob from a file

index-pack.. Build pack index file for an existing packed archive

merge-file.. Run a three-way file merge

merge-index. Run a merge for files needing merging

mktag..... Creates a tag object

mktree ...... Build a tree-object from ls-tree formatted text

pack-objects Create a packed archive of objects

prune-packed Remove extra objects that are already in pack files

read-tree ... Reads tree information into the index

symbolic-ref Read and modify symbolic refs unpack-objects

Unpack objects from a packed archive update-index Register file contents in the working

tree to the index update-ref.. Update the object name stored in a ref

write-tree.. Create a tree object from the current index

| Interrogators | (n | lum   | hing      | o-) |
|---------------|----|-------|-----------|-----|
| Interrugators | V) | ıuııı | $m_{111}$ | ٦)  |

cat-file..... Provide content or type and size information for repository objects

diff-files.. Compares files in the working tree and the index

diff-index.. Compares content and mode of blobs between the index and repository

 $\begin{array}{c} {\tt diff-tree} \ldots \text{ show files which have been changed by} \\ {\tt last \ commit} \end{array}$ 

--name-only

show only names of files

-r recursively

for-each-ref Output information on each ref

ls-files..... Show information about files in the index and the working tree

ls-remote ... List references in a remote repository

ls-tree..... List the contents of a tree object

 $\Rightarrow$  list all files for specific branch: lstree -r master --name-only

merge-base . . Find as good common ancestors as possible for a merge

name-rev..... Find symbolic names for given revs
pack-redundant

Find redundant pack files

rev-list..... Lists commit objects in reverse chronological order

show-index .. Show packed archive index

show-ref..... List references in a local repository

unpack-file. Creates a temporary file with a blobs contents

var..... Show a git logical variable

verify-pack. Validate packed git archive files

### Synching repositories

daemon...... A really simple server for git repositories

fetch-pack.. Receive missing objects from another repository

http-backend Server side implementation of Git over HTTP

send-pack... Push objects over git protocol to another repository

update-server-info

Update auxiliary info file to help dumb servers

### Helper commands

http-fetch . . Download from a remote git repository via HTTP

 $\begin{array}{cccc} \mathtt{http-push} \dots & \mathtt{Push} & \mathtt{objects} & \mathtt{over} & \mathtt{HTTP/DAV} & \mathtt{to} & \mathtt{an-other} & \mathtt{repository} \end{array}$ 

parse-remote Routines to help parsing remote repository access parameters

receive-pack Receive what is pushed into the repository

 ${\tt shell}$  ....... Restricted login shell for only SSH access

upload-archive

Send archive back toarchive

upload-pack. Send objects packed back tofetch-pack

## Internal helper commands

check-attr.. Display gitattributes information
check-ref-format

Ensures that a reference name is well formed

fmt-merge-msg

Produce a merge commit message

mailinfo..... Extracts patch and authorship from a single e-mail message

mailsplit ... Simple UNIX mbox splitter program merge-one-file

The standard helper program to use withmerge-index

patch-id..... Compute unique ID for a patch

sh-setup..... Common git shell script setup code

stripspace.. Filter out empty lines
